QF CLOSURE SYSTEM

PRATICITY AND PERFORMANCE

ATOP closure system, the mechanism which ensures progressive, uniform closure along the entire length of the foot of the liner.

The Legacy QF features a closure system which combines a lever, Velcro and the ATOP wheel mechanism positioned to the rear of the cuff which ensures progressive, uniform closure along the entire length of the foot of the liner. Unlike traditional lace-ups, this revolutionary, fast and easy-to-use system ensures boots stay perfectly tensioned throughout your skating session. To remove your shoe, simply turn the wheel anticlockwise and gently pull the tongue of the shoe forwards.

TECHNOLOGIES

VERSO SET UP

SPEED AND MANEUVERABILITY

The speed and comfort of the big wheels and the greater maneuverability of a short frame

Verso is a new frame configuration that mounts 3 wheels of 100, 110 or 125 mm to take advantage of the speed and comfort of the large wheels and the greater maneuverability of the short frame. The skate is lighter to push, faster and more maneuverable.

MICRO JEM MECHANISM

The skates equipped with the Mirco Jem™ mechanism by Fila Skates grow with the feet of the youngest thanks to a millimetric size adjustment that is simple, safe and allows even the slightest adjustment of the skate while it is being worn.

The adjustment is made with a simple gesture:

- pull out the lever positioned under the heel
- turn the lever to lengthen/shorten the skate

JEM (Junior Extension Mechanism)

MULTITECH GEAR

IN OTHER WORDS, SAFETY

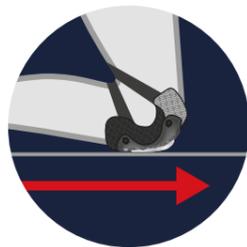

Multitech gear technology involves the over-injection of a harder plastic slider onto the surface of the protector which improves impact absorption and slip during a fall.

Each Fila Skates protector is made of durable materials on the outside and anti-allergic/anti-bacterial fabrics in contact with the skin, they are easy to wear and adapt to the shape of the joints.
